

Snagly – AI Resale Assistant

Concept & Design Notes

Vision

Build an AI-powered app that identifies undervalued listings by comparing live marketplace listings with historical sold prices and estimating realistic resale profit. The aim is to surface only the highest-quality opportunities rather than overwhelming users with listings.

Core User Journey

1. User creates a watch (e.g. 'Sony 24-70 GM II').
2. AI analyses comparable sold items to understand typical value.
3. AI understands current listings (model, condition, accessories, faults, seller details).
4. Live monitoring checks for new listings.
5. When a profitable opportunity appears, the user receives a notification.
6. One tap opens the marketplace listing.

AI Features

- Match comparable items intelligently rather than by keywords.
- Estimate fair resale value.
- Calculate expected profit after fees, shipping and other costs.
- Score each opportunity with a confidence rating.
- Explain WHY a listing is a good deal in plain English.

Deal Screen

Display purchase price, estimated resale value, fees, shipping, estimated net profit, ROI, expected time to sell and AI confidence. Include a short AI explanation highlighting why the opportunity stands out.

Portfolio

Track every purchase, resale price, fees and actual profit. Show monthly profit, ROI, average holding time and total flips.

Future Roadmap

Expand beyond eBay to Facebook Marketplace, Vinted, Gumtree, Cash Converters, CEX and other marketplaces. Eventually become a universal AI-powered opportunity finder.

Branding Thoughts

Working title: **Snagly**.

Reasoning: memorable, friendly, modern and evokes 'snagging a bargain' without tying the app to one marketplace.

Potential taglines:

- AI finds the deals. You snag them.
- Snag smarter.
- Find it first.
- Never miss a bargain again.

Design Direction

Minimal Apple-inspired interface with clean typography, generous spacing, simple cards, restrained colour palette and clear emphasis on confidence scores and estimated profit. The product should feel like a premium financial tool rather than a bargain-hunting app.
